

ABLOY® PROTEC²

Professional locking solution

ABLOY PROTEC² is the latest milestone in the development of the unique ABLOY rotating disc cylinder keying systems that offers several unsurpassed security features and benefits.

ABLOY

ABLOY® PROTEC²

Professional solutions for demanding high security needs

The world is challenged by mounting security threats in every conceivable sector. Our mission is to meet these challenges and to provide complete locking solutions for the 21st century's marketplace. ABLOY PROTEC² is one more milestone in that mission.

ABLOY locks and cylinders are chosen worldwide for highly sensitive applications. They are recognised as the world's premium high security locking systems, used extensively by private, commercial and government end users who demand the ultimate in high security. Security solutions may vary at different premises according to their size and type of business. But the need for high security system solutions is universal. As an example, the world is dependent on water, electricity and communications networks. Security in these utilities is essential for our well being and therefore their protection is vital.

A growing number of applications depend upon the ability to deliver their services 24/7. Any break or interruption to their service caused by vandalism or physical attack can prove devastating for the security, health, financial costs and reputation of a facility or an enterprise. Combining safety, security and convenience is a challenging task so the quality, design and functionality of the locking system must meet those challenges.

Security threats are not static, nor are the solutions. Abloy has extensive experience and expertise in the field of high security locking systems and we can offer you highly secure and customized solutions.

Secure in every way

In an ABLOY PROTEC² locking system, different products can be keyed into the same master key system and thus all products can be operated with just a single key. This simplifies your locking system and key management. The range is wide, there are 1,97 billion different key combinations providing the possibility to create extensive Master Key systems that fulfil your exact specifications.

ABLOY PROTEC² is durable and long lasting thanks to its unique design and precision manufacturing. The unique and patented rotating disc technology provides smooth and reliable functionality also in extreme environments.

ABLOY PROTEC² can be combined with electromechanical CLIQ-technology. This electromechanical system is intelligent and highly customizable. It enables flexible and secure access management, including time functions, into your daily operations. And in case of a lost or stolen key it can be marked as lost and access rights will not be revalidated. Both the cylinders and keys have an audit trail feature. CLIQ makes things click. It lifts your locking security to a next level.

We have only one mission – to offer you the ultimate in high security protection

The patented technology in ABLOY PROTEC² is advanced and it exceeds the highest industry standards. Our worldwide team of security professionals can help you design a system that is right for you.

The UNIQUE ABLOY cylinder mechanism, based on the use of rotating discs instead of the traditional springs and pins, is known widely by security professionals as the world's PREMIUM high security locking system. ABLOY PROTEC² is the latest development of this unique technology which offers numerous UNSURPASSED features and benefits over conventional locking products.

PATENTED features in keys and cylinders assure that the installations will be protected for many years to come. ABLOY PROTEC² worldwide patents are valid until 2031.

SECURITY level has been further improved in ABLOY PROTEC² by a new disc controller and key design. This patented disc controller structure requires a moving element in the key to mate with the cylinder internally in order to function, thus raising the difficulty of any attempt to copy an unauthorised key, reaching a new higher level of security.

PROFESSIONAL design makes the mechanical ABLOY PROTEC² cylinders bump proof. DBS (Disc Blocking System) is a patented feature that stops attempts to manipulate the discs.

DIVERSE master keying features are offered based on our vast number of different key combinations. In ABLOY PROTEC² locking systems, different products can be keyed into the same master system with all products being operated with a single key.

ADVANCED high security features can be further enhanced by combining the intelligent CLIQ technology with the mechanical ABLOY PROTEC² master key system to utilise both mechanical and electronic identification. Communication is encrypted. Cylinders and keys have an audit trail feature. Adding and removing access rights is easy, flexible and secure.

DURABLE design without springs and pins provides reliable function in severe environments.

LONGEVITY is further reinforced with our new patented feature, AWS (Anti Wear System) which is a mechanism in the ABLOY PROTEC² key and cylinder that prolongs the life cycle even in extensive use applications.

CONTROLLED distribution of ABLOY PROTEC² key blanks and the use of different security levels and profiles ensures a high level of key control tailored to your exact needs.

PRACTICAL planning of your master key system is possible along with the ability to incorporate multi level systems each with unique access rights for different user groups.

EXPANDABLE locking systems can be designed to cover large and extensive facilities.

UPGRADEABLE system can combine a mechanical master key system with electromechanical functions.

SOPHISTICATED ABLOY OS INCEDO software provides a user friendly tool to facilitate the easy administration of the locking system. Available only in selected countries.

EXTENSIVE PRODUCT RANGE of ABLOY PROTEC² means that we can secure numerous applications from door environments to industrial applications and equipment.

ABLOY PROTEC² offers a global solution. Products are designed and manufactured to meet and exceed requirements of several international, national and customer specific standards.

ABLOY® PROTEC²

ONE CORE, WIDE PRODUCT RANGE

ABLOY PROTEC² meets and exceeds requirements of several international, national and customer specific standards and requirements. With an extensive product range, ABLOY PROTEC² provides a global solution.

While the core of the cylinder remains the same, the outer covering can be changed to meet the requirements of the specific application.

High quality for high demands

ABLOY locks and cylinders are chosen worldwide for sensitive applications in the most exposed locations, continually defying the elements, on land and sea, in the coldest and the hottest of climates. ABLOY products are selected as the first choice of the professionals in countless applications all around the world.

Our clients trust us. ABLOY professional high security solutions are used worldwide in:

- Governmental and institutional applications
- Utilities
- Telecommunication applications
- Industrial plants
- Education
- Healthcare
- Museums and Heritage
- Corporate applications
- Transportation
- And many more

ABLOY has a key-role in the worldwide security

Abloy maintains Product Security Center at www.abloy.com/securitycenter. We recommend that You check the Center on a regular basis in order to be fully informed of product security updates, so that your knowledge of our products remains optimal.

It is the customer's responsibility to define the required level of security , whilst taking into consideration relevant factors for its operations . To achieve the overall level of security required in the customer's operations multiple layers of security must be in place . These include for example locking system , key management system , access management, CCTTV and alarm system as well as physical security in a manner and level specified by the customer.
